Summary

MCA (Generative AI specialization) student and BCA graduate with a strong foundation in full-stack web development, cybersecurity, and AI-driven applications. Skilled in Python, JavaScript, PHP, React, and FastAPI, with hands-on experience building and deploying intelligent web platforms. Demonstrated ability to integrate deep learning models (PyTorch, ResNet, U-Net), 3D visualization (Three.js), and RESTful APIs into production-ready applications. Strong problem-solver with a passion for creative innovation at the intersection of AI and modern web technologies.

Education

SRM Institute of Science and Technology — Chennai, India

Master of Computer Applications – Generative AI Specialization (2024 – Pursuing)

Women's Christian College, University of Madras — Chennai, India

Bachelor of Computer Applications (2021 – 2024)

Skills

Programming & Frameworks

- Languages: Python, JavaScript, TypeScript, PHP
- Frontend: React, Vite, Three.js (React Three Fiber, Drei), Framer Motion, HTML, CSS, Tailwind
- Backend: FastAPI, Node.js, REST APIs
- AI/ML: PyTorch, U-Net, ResNet-50, Grad-CAM, Scikit-learn
- Databases: SQLite, SQL, MySQL

Tools & Platforms

- Dev Tools: Git, GitHub, VS Code, Vite, ngrok
- Data & Visualization: Tableau, Excel, Pandas
- Cybersecurity: Threat identification, Phishing analysis, Cyber threat management
- Soft Skills: Problem solving, Teamwork & communication, Adaptability

Experience

Cyber Security Intern | [Sapience Edu Connect, Kerala](#) | Jan 2025 – Feb 2025

- Analyzed phishing campaigns and developed threat identification reports
- Applied cyber threat management frameworks in simulated security environments

Full Stack Development Intern | [InternEzy, Chennai](#) | Aug 2022 – Sep 2022

- Built and deployed full-stack web features with integrated data management
- Gained practical experience with JavaScript, PHP, and database integration

Projects

OculoCardia AI (RetinaHeart AI)

An AI-powered retinal fundus image analysis system that predicts cardiovascular risk. Built with PyTorch (U-Net for segmentation, ResNet-50 for classification), FastAPI backend, and a React/Vite frontend with Glassmorphism UI and Framer Motion animations. Features include Grad-CAM heatmaps, clinical PDF report generation, a Gemini API-powered chatbot, patient history tracking with email login (FastAPI + SQLite), and a planned Prevention & Lifestyle Module with a 30-day risk calendar.

Beat Quest

A Spotify-powered music quiz game targeting Gen Z and Gen Alpha. Integrated Spotify Web API for real-time track data, built in TypeScript with gamified question mechanics. Hosted at github.com/codebuddynovice/beat-quest-tunes. Used ngrok for OAuth redirect handling during development.

ArtConnect

An online platform connecting artists and patrons globally. Integrated AES encryption for secure transactions and SQL for efficient data management.

Certifications

- Career Essentials in Cybersecurity – Microsoft & LinkedIn (Jul 2024)
- Prompt Engineering for Everyone – IBM (Nov 2023)
- Cyber Threat Management – Cisco (Nov 2023)
- Introduction to Cybersecurity – Cisco (Nov 2023)
- Python Essentials 1 & 2 – Cisco (Feb & Nov 2023)
